	1. Direct model	2. Hybrid: model + learning	3. Frugal learning	4. Heavy learning, language models
Medicine	● LQL-Equiv: dose equivalence	● Thyroid radioiodine: model, then hybrid twin		
Energy	● sCV and F: forecastability ● NICE, γ-index: evaluation ● BLEND: cyclic persistence ● Tunnel Load Simulator	● NWP + ARMA/ANN (2012)	● MIMO-ELM: 7 grid signals ● Satellite: per-cell ELM	○ U-Net, LSTM: tested, not kept
Language				● WebSemantic: the language model reads, validated code computes

one step to the right only for a measured gain

○ hollow marker: tested, not kept
